Senior Product Designer with 8 years in enterprise B2B SaaS, designing high-density desktop tools for professional power users at Microsoft scale, from Azure Purview's earliest foundations through AI agent observability. I specialize in information architecture for massive data sets, complex state and system-feedback flows, and documenting design rationale so cross-functional teams stay aligned. Work shipped to Microsoft 365 customers globally and headlined at Microsoft Ignite and IAPP Global Summit.

Experience

Purview DSPM & AI Observability

2024 - Present

Microsoft Purview · Data Security Posture · Data Visualization

Designed the outcome-driven DSPM dashboard, a high-density desktop view surfacing data risk across an organization's entire data estate, and introduced AI Observability, treating AI agents (Copilot, third-party bots) as governable security entities. Restructured navigation around outcomes rather than tools so admins act on risks directly from the dashboard. Unveiled at Microsoft Ignite 2025.

AI-Powered Privacy Manager (Copilot Integration)

2023 - 2024

Microsoft Priva · Security Copilot

Led interaction design for Privacy Manager Copilot: how AI surfaces suggestions, how users stay in control of AI-generated content, and how the experience hands off between conversational and native UI without losing context. Cut consent wizard completion from hours to minutes via AI auto-population. Prototype demoed live at IAPP Global Summit, April 2024.

Microsoft Priva - Privacy Management Suite

2020 - 2024

Microsoft Priva · DSR · Consent · Risk · Assessments · Trackers

Led end-to-end UX across 5 privacy products (Subject Rights Requests, Consent Management, Privacy Risk, Assessments, Tracker Scanning), replacing manual spreadsheet workflows with automated, GDPR/CCPA-aligned operations. Defined the information architecture for a unified Priva home, a single cross-product view for the first time. Shipped to Microsoft 365 customers globally in 2024.

Project Babylon — Azure Purview Launch

2019 - 2021

Azure Purview · Data Governance & Policy

Designed Azure Purview's policy management end to end, including a guided, sentence-structured policy builder that let non-specialist data officers author governance policies safely, plus enforcement and alert investigation flows. Became a core design pattern for Purview compliance, shipping in the December 2020 public preview.

Azure Data Catalog UX Revamp

2018 - 2019

Azure Data Catalog Gen1 · Data Discovery

Led independent user research that exposed critical usability gaps in Azure Data Catalog Gen1, then overhauled navigation across large asset inventories and designed the Expert Profile panel and Catalog Analytics dashboard. Fed directly into Azure Purview's 2020 launch.

Education

Bachelor of Design

2014 - 2018 · York University

Skills

Design & Craft - Advanced Figma · Hi-fi & interactive prototypes · Complex dashboard UX · Information architecture · Data visualization

AI Workflow - Figma Make · Claude · Vibe-coded prototyping · Copilot / LLM UX · Conversational UI · Prompt design

Domain - Enterprise B2B SaaS · Data governance · Security posture · Privacy (GDPR/CCPA) · Compliance tooling

Methods - User research · Usability testing · Scenario-driven design · Design specs & decision documentation · Partnership with PM, TPM & Eng
